Is it against any policies to display this data to other users of the app without checking its visibility with their own access tokens?

Can you post in privacy and trust feedback group, Connie ?

Eddie O'Neil

Yes, apps can keep info they're allowed to read updated. What app is this?

Connie Yang

7:12pm Apr 16

Eddie the app had my correct info (the actual public/friends data) and some time after I added the fake jobs, it pulled in that data. I don't know when, I didn't know it had happened until some one mentioned it.

Ryan: we've talked about doing exactly that. If it worked that way, we trade this issue for a new one - people asking "where's my photo/etc".

Neither experience is great for people, and both rely on developers doing something reasonable.

In Connie's case, the experience was poor.

In Tinder's case, the experience of letting people explicitly choose to widen the audience of Only Me or Friends photos to everyone using the app is pretty good.

Connie, what do you mean the app was auto-updating profiles?

['Only me' Profile info leakage via platform]

Apps on platform can automatically pull 'Only Me' info from profiles and displays it to both you and *other people* using that app.

How I found out: I have a lot of 'Only Me' jobs that I use for testing, and I found out that apps that I had previously auth-ed were automatically updating profiles with that data, and I cannot control the display of it.

While "whoa how did you start working at Casterly Rock" is a fun opener, isn't this directly violating what we tell users is 'Only Me'?
